

EXP 6 Demonstrate Session Tracking using HttpSession

AIM:

To implement a simple login system using **HttpSession** to track user sessions in a Java Servlet.

ALGORITHM:

Step 1: Create an HTML **Login Form** to take **username & password** as input.

Step 2: Develop a **Servlet** (`LoginServlet.java`) to handle login requests.

Step 3: Validate the user credentials and start an **HttpSession**.

Step 4: Redirect users to the **DashboardServlet**, where session details are displayed.

Step 5: Provide a **LogoutServlet** to end the session.

Step 6: Run the server and test session tracking.

PROGRAM:

index.html (Login Page)

```
html

pattern>/LogoutServlet</url-pattern>
    </servlet-mapping>
</web-app>

```

OUTPUT:

A login form titled "Login System with Session Tracking" is displayed on a white background with rounded corners. The form is set against a background with a pink-to-blue gradient. It contains two input fields: the first is labeled "Lithesh M" and the second is a password field with masked characters ".....". Below the password field is a teal "Login" button.

Login System with
Session Tracking

Lithesh M

.....

Login

RESULT: The Session Tracking using HttpSession were executed successfully.
